

The power is at your fingertips - stay fully connected with your colleagues through Bleepa's smooth digital transfer of patient information. From field to specialist, across care settings and internationally, share and annotate high-quality medical images and rapidly discuss patient care.

Bleepa - Share the whole picture

Bleepa is the essential tool for remote, secure communications between clinicians and teams - an easy-to use, digital medical imaging communications platform that enables clinicians to rapidly and securely view and discuss patient cases at the touch of a button.

As a regulated medical imaging communications platform that enables users to share images such as X-ray, CT, MRI or ultrasound at a standard approved for clinical use, Bleepa's CE mark gives you peace of mind and confidence to use, knowing that images and videos are of the highest quality.

Streamlined simplicity

Bleepa does things a bit differently. Rather than having to find individual patients in multiple, disconnected systems, users can log into an individual patient case within one system and do everything they need to within the Bleepa system. It ensures that every clinical action links to the patient and that every clinician in each setting can see those actions.

Bleepa facilitates a dynamic and instant interaction between referrer, clinician and specialist that can help to triage cases and ensure a smooth patient pathway.

Empower swift decision making

As we are faced with ever more pressures on clinicians' time and the need to deliver superior patient care, Bleepa can provide a fully integrated solution that effectively puts the right people in the virtual room, enabling swift decision making, access to specialist opinions and a positive patient experience.

Intuitive to use

Simple to integrate into your existing operating systems, it is easy to create a secure network with all the information and functionality needed for clinicians to manage workloads more effectively.

Bleepa is easy to use, intuitive and quickly becomes a daily part of your busy life. With access at your fingertips, you can maintain contact with your team at all times, oversee their work, offer and receive advice and guidance, wherever you are.

Security and quality

Bleepa is a secure, encrypted, zero footprint application meaning that no patient data is stored locally on any device. Clinical communication is based around the patient to enable structured referrals and minimize risk.

Bleepa is manufactured using processes that adhere to the ISO 13485 and 27001 quality and information governance standards, Cyber Essentials Plus security standards and is the only communication platform to be certified as a CE marked device for undertaking medical image review.

With a fanatical focus on quality, security and safety, Bleepa is the only digital medical communications platform to provide all the communications needs that clinicians want, in a single, regulated, safe and proven mobile communications imaging platform.

Add a colleague, share a patient and start discussing

Share, annotate, simultaneous review of images

Patient specific chat using messaging or video call

Make structured referrals and gain second opinions
