

Manage wound care and minor injuries referrals more effectively

Empower clinicians to capture photos of burns, lesions and minor injuries rapidly to support medical photography teams and enable better informed, efficient referrals within and across care settings.

Bleepa is a medical imaging clinical communications platform with an in-app module for securely taking photos of patients' minor wounds or lesions and capturing consent as part of the auditable patient record. The photos can be used by colleagues within and across care settings for review over time or as part of any follow-up clinics.

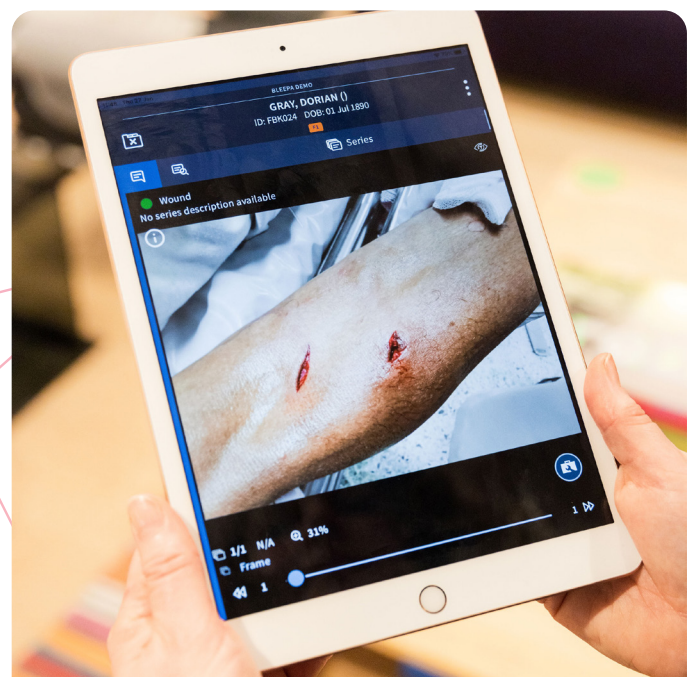

Support medical illustration teams by freeing them up to focus on more complex cases and equip clinicians in busy departments to rapidly capture images while complying with data protection standards.

Share the whole picture

- + Quick and easy to use
- + Take, store, annotate and share medical photography securely.
- + Add images to patient record for efficient referrals
- + Capture patient consent as part of an auditable record
- + UKCA marked, encrypted, zero footprint application

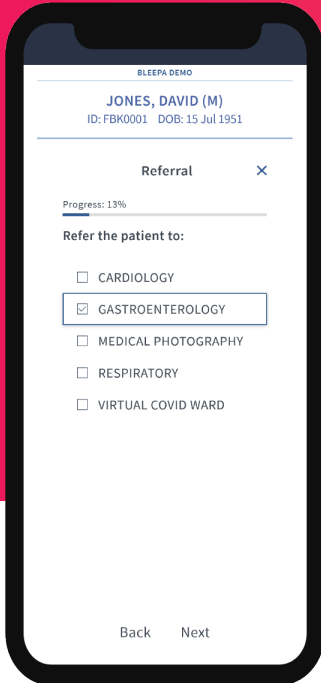

Bleepa can facilitate data sharing between care settings including across primary, secondary and community care, the data can flow with the patient utilising our patient-centric CareLocker cloud architecture.

Clinical photographs can be reviewed within the application but should not be used for primary diagnosis, nor should they be treated as a replacement for professionally taken medical photographs or dermatoscopy images.

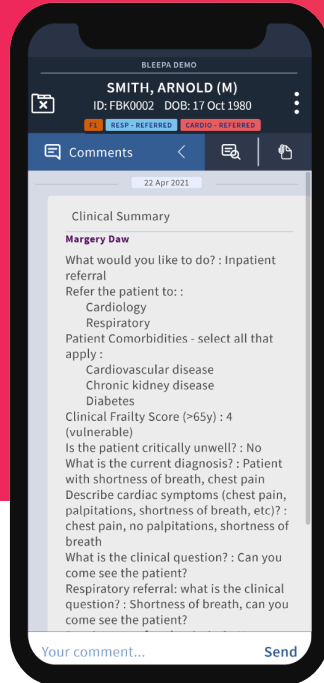

Direct dialogue

Add a colleague, share a patient and start discussing their care

Efficient referrals

Manage patient referrals and get second opinions

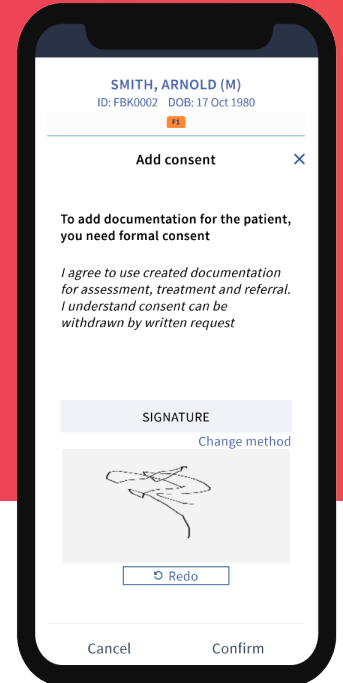

Capture photos

Take clinical images to add to the patient record

Record consent

Capture patient consent for any medical images taken

Security and information governance

Bleepa is a secure, encrypted, zero footprint application meaning that no patient data is stored locally on any device. Clinical communication is based around the patient to enable structured referrals and minimise risk.

It can be easily integrated into any existing IT infrastructure, including PACS, PAS, RIS, and EPR. We support all standard interfaces for a smooth implementation and integration.

Bleepa is manufactured using processes that adhere to the ISO 13485 quality standard and to the ISO 27001 and Cyber Essentials Plus security standards. It is the only communications platform used by the NHS that is a UKCA-marked device for undertaking medical image review.

Bleepa is manufactured by **FEEDBACKmedical**
