

# Use case scenarios

# Scenario 1 – faster specialist input

- John's GP suspects he may have bowel cancer and refers him for diagnostic tests at the local CDC via Bleepa
- Following the tests, the junior radiologist is unsure of the diagnosis and needs input from colleague Ravinder, a specialist radiologist, via Bleepa's chat function
- Bleepa alerts Ravinder to the message, which he picks up on call at home
- Saving time before the full radiology report is written and shared, Ravinder is able to confirm the scans indicate cancer in the Bleepa chat
- As a result the pathway coordinator is able to send John's case for urgent, early review at the MDT meeting the next day
- The gastro consultant, following the MDT, messages the GP to confirm diagnosis and move John on the pathway rapidly to treat the cancer. The GP is able to see what's happening simultaneously at every stage of the cancer pathway

Facilitate early, rapid specialist input for clinical triage

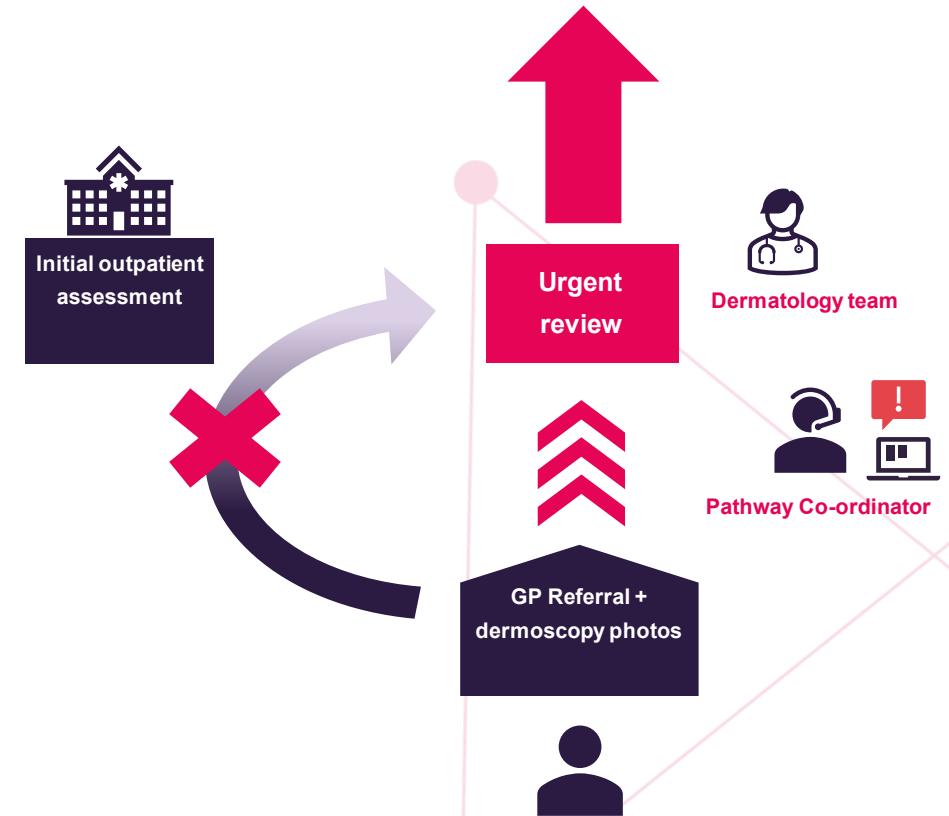

Bypass diagnostic bottle-necks by sharing medical grade imagery for remote review

Flag urgent cases for review to meet faster diagnosis targets

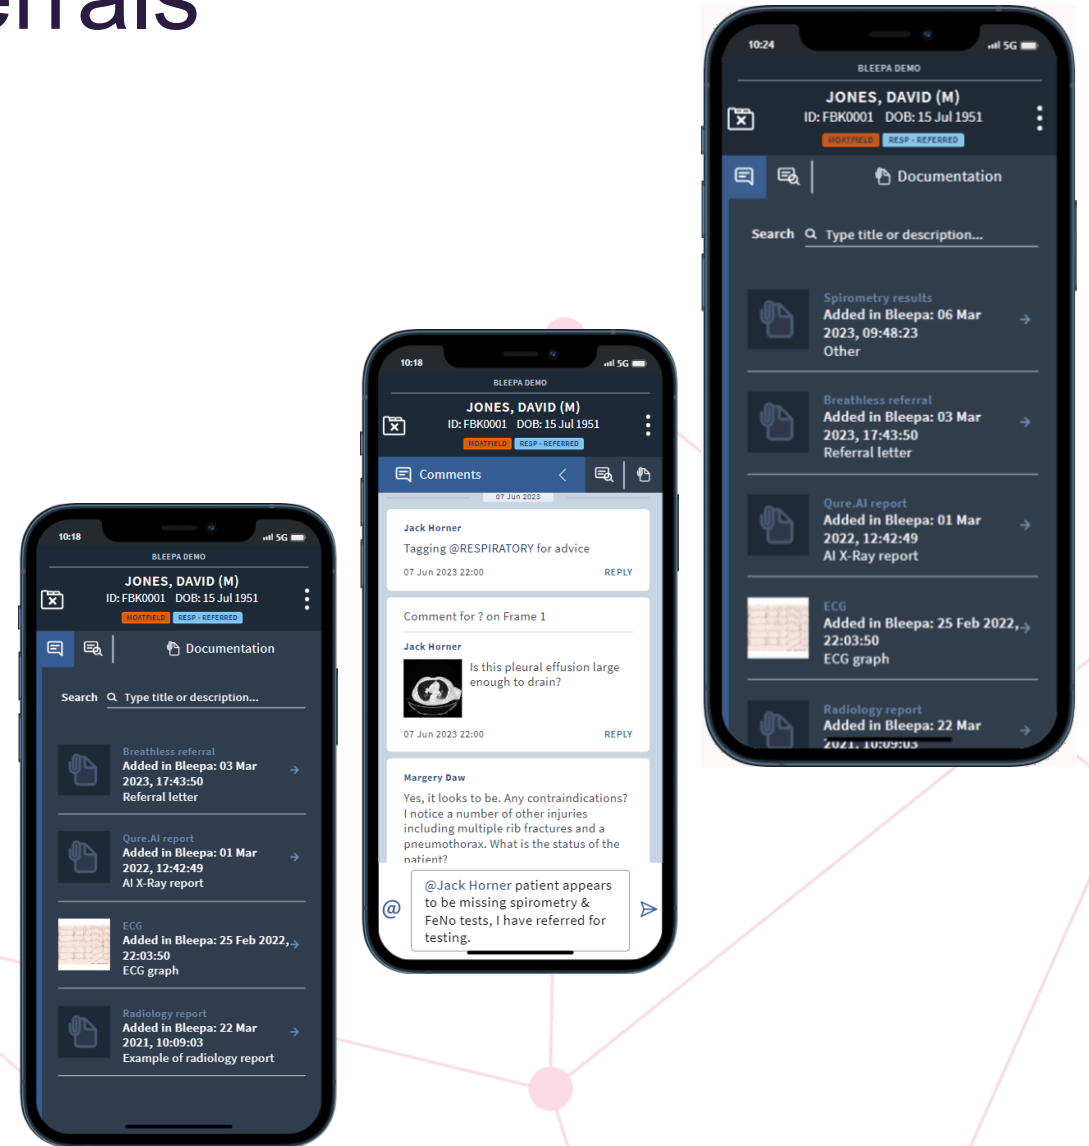

# Scenario 2 – reducing outpatient appointments

- Rob is concerned about a mole on his arm and goes to his GP Amara
- Amara refers Rob via Bleepa to dermatology, sharing dermoscopy photos with the referral
- Ken sees the referral on the triage list, and decides Rob needs urgent review
- Ken advises Amara of the urgent referral via Bleepa and the booking clerk uploads the appointment letter
- Following the consultation, Rob is referred for surgery
- The skin cancer nurse also liaises with Rob to manage his care
- This pathway removes the need for an initial outpatient assessment before the urgent review and speeds up the diagnosis for Rob

# Scenario 3 – well-informed referrals

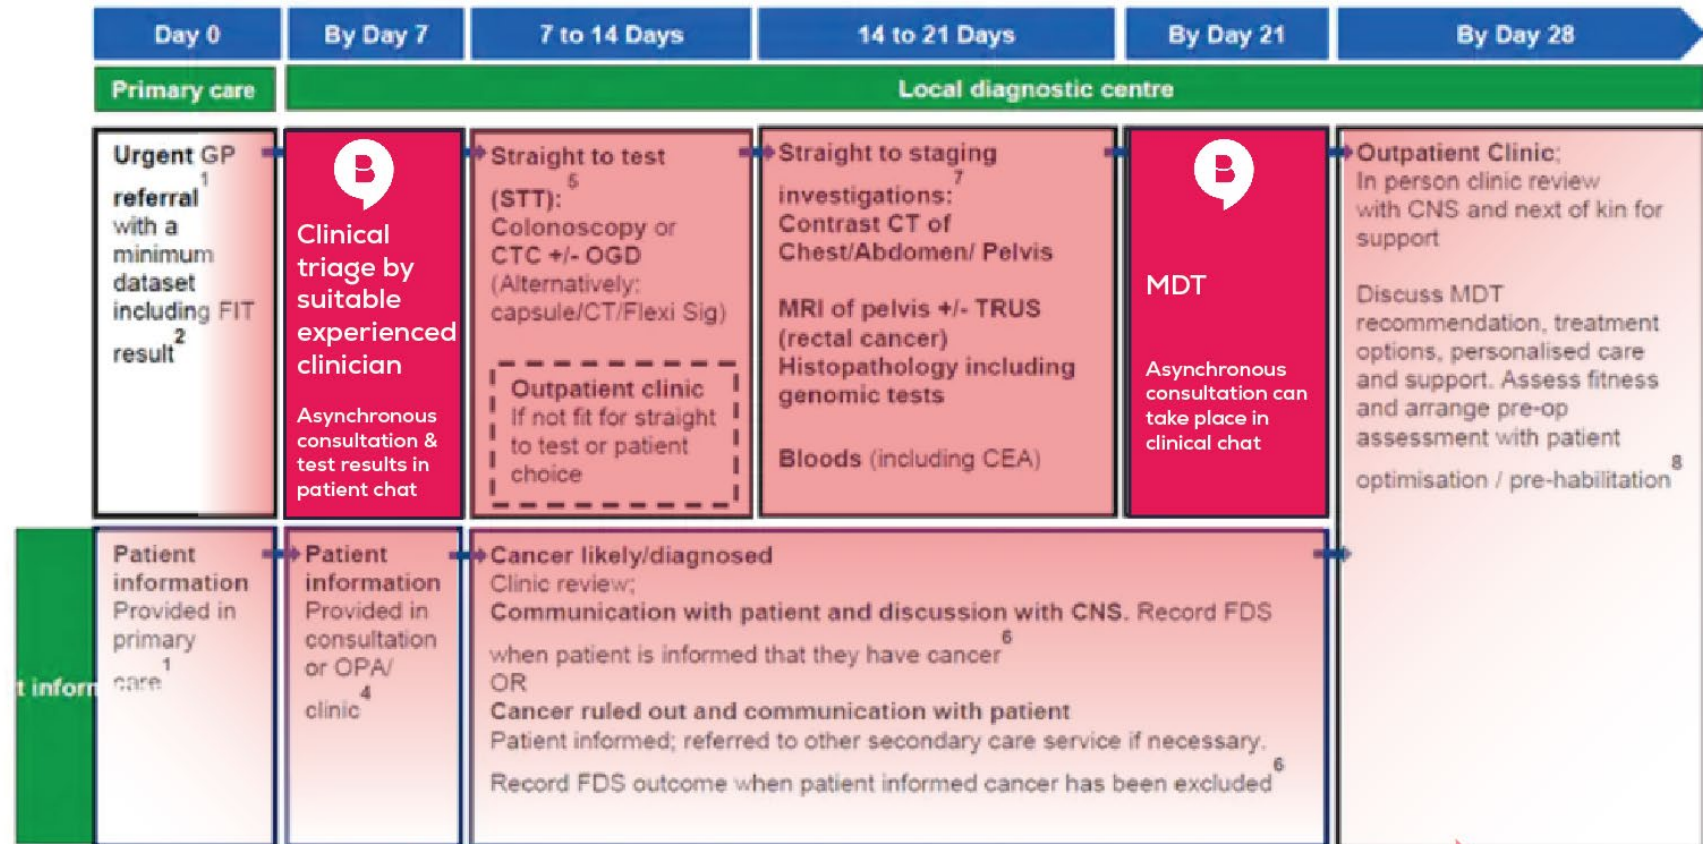

- GP Amara sends a referral via Bleepa to the hospital for Akira who has breathlessness
- Respiratory consultant George picks up the secondary care referral, reviews the information and sees that it doesn't include spirometry and a FeNo test
- He refers Akira via Bleepa to the CDC for the missing tests
- The CDC picks up the referral, books in Akira's tests and shares the results via Bleepa with all parties
- George confirms a diagnosis following the MDT and keeps Amara and Akira informed of progress
- The flow of communication and ease of referral through one shared system ensures that Akira isn't brought in at the wrong time for an appointment and her pathway isn't delayed by not having the right information at the right time

# Facilitating faster diagnostic standards

## 28-day best practice timed pathway

-  Bleepa can directly facilitate and speed up this stage of the pathway
-  Bleepa supports this process efficiently with data, information and communication tools
-  Bleepa supports by facilitating data sharing

 Shared patient view across settings, with GP able to track patient at all stages of the pathway

# What clinicians say about Bleepa

“My favourite thing about Bleepa is that it allows me to more effectively communicate what I want to say or handover to a colleague... It feels very natural to pop any updates into a live chat.”

**Paul Higgins, Registrar**

“Bleepa works very well for us as a 24-hour service in our emergency department... Any reduction in the time taken to review patients and help to improve their journey through the hospital is crucial when every second counts.”

**Justine Loh, Consultant in Emergency Medicine and Paediatric Emergency Medicine, Digital Health Lead in ED**

“Bleepa was really easy to use... I will thoroughly miss it when I go to work in other hospitals who don't have it!”

**Ayman Kasir, Locum Gastroenterology Registrar**

“Bleepa has been extremely helpful in order to manage referrals. Not only does it make things easier, it also brings about good accountability and handover between registrars and consultants.”

**Dr Kuzhiyanjal Anish Kuriakose, Specialist Doctor Gastroenterology**
