

CareLocker

Be the first to go digital with
CareLocker

CareLocker is a secure, zero-footprint application for storing and accessing patient imaging and results.

Through **CareLocker**, a patient's data and DICOM-quality medical imaging can be accessed immediately via a mobile device, saving valuable time and cutting out the need for costly hard copies of scans.

Diagnostics are accessible through a progressive web application on a patient's mobile phone to give them more control over their medical information. This data is encrypted, with access restricted to the patient or caretaker and permitted health professionals.

Powerful imaging tools

View, scroll, adjust and contrast clinical-quality imaging such as MRI or CT scans on a mobile device.

Once a patient has signed up to CareLocker, as a preferred referring clinician of one of our partner centres, scans can be reviewed ahead of appointments alongside all diagnostic data and results to provide an efficient service for your patients.

Benefits of CareLocker

Instant access to patient medical data via a mobile device

Safe and secure clinical-quality image review in a zero-footprint application

Save time and money without the need for hard copy films

Refer your patients and give them more control over their healthcare data

For your patients, CareLocker provides secure, easy-to-use management of their medical imaging and results from the convenience of their own mobile device. Offered on an annual subscription basis, patients can be sure their data is safely stored and up to date.

Get in touch today to see how CareLocker can work for you.
